Health Data for Good: Reimagining Federal Health Statistics

Project Title	Health Data for Good: Reimagining Federal Health Statistics
Project Summary	We produce the official health statistics for the U.S., but regular people have a hard time finding the data that they need. This project will guide the redesign of our paper, web, infographic, data visualization, and social media tools to better help people be healthy.
Country	United States

Project Description

A big part of being healthy is knowing risks and choosing lifestyles that reduce risk, i.e., understanding health statistics. Americans want this information but often have a hard time finding and interpreting it. The National Center for Health Statistics produces the official health statistics for the U.S., and it is our duty to get this information to those who need it.

This project will guide the redesign of our paper, web, infographic, data visualization, and social media tools to better help people be healthy. Products will be reconfigured and developed to provide an easy and fun user experience for those looking for health information. Team members will learn and work together to apply design thinking to guide product development and implementation.

Required Skills or Interests

Skill(s)
Data visualization
Design thinking
Infographic design
Website design

Additional Information

You will be part of a team of health data analysts and communication specialists dedicated to improving the

health of all Americans. Here is more info about NCHS (https://www.cdc.gov/nchs/index.htm), our infographics (https://www.cdc.gov/nchs/hus/hus_infographic.htm), and our data visualizations (https://www.cdc.gov/nchs/data-visualization/index.htm).
